LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to put a short set of instructions in order and identify an instruction that needs correction. They will also learn to identify the stage, sprite and block area in Scratch and save a simple project. Through teacher demonstrations, discussion and practical activities, students will practise these skills and explain their ideas.

End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Ask pupils to show their starting point, final step and one correction they made. Check that each pupil can find the stage, run a block and locate the saved project. Note pupils who need further guided practice.

LESSON SLOTS - MONDAY AND THURSDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	4 January 2027	By the end of this lesson, students will be able to put a short set of instructions in order and identify an instruction that needs correction.	**H:** Give a deliberately muddled instruction for drawing a face. **ID:** Explain that a program is a set of instructions a computer follows, and order matters. **WD:** Arrange three movement cards, act them out and correct a misplaced step. **YD:** Pairs create a short route for a toy or paper character and swap instructions to test it. **C:** Ask pupils to show their starting point, final step and one correction they made.	**Support:** Provide large block cards or a short starter script and model one step at a time. Let pupils explain with pictures before typing. **Extension:** Ask pupils to predict the result of one changed block and explain the outcome after testing.
2	7 January 2027	By the end of this lesson, students will be able to identify the stage, sprite and block area in Scratch and save a simple project.	**H:** Show the Scratch cat and ask what could make it move. **ID:** Introduce the stage, sprite list, code area and green flag; use the school's prepared account or offline save routine.	**Support:** Provide large block cards or a short starter script and model one step at a time. Let pupils explain with pictures before typing. **Extension:** Ask pupils to predict the result of one changed block and explain the outcome after testing.

			WD: Drag a move block into the code area, run it and save the project with a meaningful name. **YD:** Pupils make a sprite move, identify the three main areas and save or export their work with guidance. **C:** Check that each pupil can find the stage, run a block and locate the saved project.

MATERIALS NEEDED FOR THE WEEK

- Oxford International Primary Computing Student Book 2
- Teacher computer and display
- Scratch 3, school-managed access or offline editor, and a class save folder
- Movement cards, block cards and the named starter project where required
- Whiteboard and markers
- Student notebooks, pencils and colouring materials
- Prepared examples and the lesson success checklist

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
