LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to describe an algorithm as a plan of ordered instructions and create a simple example. They will also learn to match a picture algorithm to a short Scratch program and explain their connection. Through teacher demonstrations, discussion and practical activities, students will practise these skills and explain their ideas.

End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Ask pupils to explain what makes their plan an algorithm and improve one unclear step. Ask pupils to point to a plan step and the block that carries it out. Note pupils who need further guided practice.

LESSON SLOTS - MONDAY AND THURSDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	18 January 2027	By the end of this lesson, students will be able to describe an algorithm as a plan of ordered instructions and create a simple example.	**H:** Ask pupils how they told their partner to move the paper frog. **ID:** Introduce algorithm as the name for a clear plan; use familiar tasks before computer examples. **WD:** Write or draw a three-step algorithm for reaching a marked square. **YD:** Pupils make a short picture algorithm for a frog route and have a partner follow it exactly. **C:** Ask pupils to explain what makes their plan an algorithm and improve one unclear step.	**Support:** Provide large block cards or a short starter script and model one step at a time. Let pupils explain with pictures before typing. **Extension:** Ask pupils to predict the result of one changed block and explain the outcome after testing.
2	21 January 2027	By the end of this lesson, students will be able to match a picture algorithm to a short Scratch program and explain their connection.	**H:** Display a movement-card plan beside three Scratch blocks. **ID:** Explain that we can turn an algorithm into instructions in a program. **WD:** Translate two movement cards into	**Support:** Provide large block cards or a short starter script and model one step at a time. Let pupils explain with pictures before typing. **Extension:** Ask pupils to predict the result of one changed block and explain the outcome after testing.

			matching Scratch blocks and run the sequence. **YD:** Pupils match card plans to prepared scripts, then build one short sequence themselves. **C:** Ask pupils to point to a plan step and the block that carries it out.

MATERIALS NEEDED FOR THE WEEK

- Oxford International Primary Computing Student Book 2 printed pages 42-45
- Teacher computer and display
- Scratch 3, school-managed access or offline editor, and a class save folder
- Movement cards, block cards and the named starter project where required
- Whiteboard and markers
- Student notebooks, pencils and colouring materials
- Prepared examples and the lesson success checklist

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
