LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to use movement commands to move a sprite towards a target. They will also learn to start a short script with an event and reset the sprite for a new game. Through teacher demonstrations, discussion and practical activities, students will practise these skills and explain their ideas.

End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Ask pupils to predict the effect of changing the movement value and test the prediction. Check the start event and ask pupils to demonstrate a reliable restart. Note pupils who need further guided practice.

LESSON SLOTS - MONDAY AND THURSDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	1 March 2027	By the end of this lesson, students will be able to use movement commands to move a sprite towards a target.	**H:** Ask how the frog could move closer to the lily pad. **ID:** Explain movement steps and direction with a physical demonstration before changing blocks. **WD:** Show a move block, adjust its number and compare the distance travelled; reset the sprite before each test. **YD:** Pupils try small movement values and choose one that fits their frog route. **C:** Ask pupils to predict the effect of changing the movement value and test the prediction.	**Support:** Provide large block cards or a short starter script and model one step at a time. Let pupils explain with pictures before typing. **Extension:** Ask pupils to predict the result of one changed block and explain the outcome after testing.
2	4 March 2027	By the end of this lesson, students will be able to start a short script with an event and reset the sprite for a new game.	**H:** Run a sprite once, then ask how every player could start it in the same way. **ID:** Explain that the green flag or a key press can start instructions; a game needs a predictable starting position.	**Support:** Provide large block cards or a short starter script and model one step at a time. Let pupils explain with pictures before typing. **Extension:** Ask pupils to predict the result of one changed block and explain the outcome after testing.

			WD: Attach a when green flag clicked block and a go to starting-position block before the movement sequence. **YD:** Pupils add a start event, test the game twice and check that the frog begins in the same place. **C:** Check the start event and ask pupils to demonstrate a reliable restart.

MATERIALS NEEDED FOR THE WEEK

- Oxford International Primary Computing Student Book 2 printed pages 56-59
- Teacher computer and display
- Scratch 3, school-managed access or offline editor, and a class save folder
- Movement cards, block cards and the named starter project where required
- Whiteboard and markers
- Student notebooks, pencils and colouring materials
- Prepared examples and the lesson success checklist

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
