LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to control a basket and describe the repeated falling action in a fruit-catching game. They will also learn to add a response when fruit is caught and improve a simple catching game. Through teacher demonstrations, discussion and practical activities, students will practise these skills and explain their ideas.

End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Ask pupils to identify the controlled sprite and point to the repeated falling action. Check that catches produce feedback and that both catches and misses allow play to continue. Note pupils who need further guided practice.

LESSON SLOTS - MONDAY AND THURSDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	3 May 2027	By the end of this lesson, students will be able to control a basket and describe the repeated falling action in a fruit-catching game.	**H:** Play a short fruit-catching example and ask which sprite the player controls. **ID:** Explain the basket controls and the fruit's repeating fall. Provide a starter with the falling and edge-reset checks already assembled. **WD:** Model arrow-key basket movement, then trace the starter's change y by a small negative value and its reset to the top. **YD:** Pupils add or complete the basket controls, choose fruit and test moving the basket beneath it; save the project. **C:** Ask pupils to identify the controlled sprite and point to the repeated falling action.	**Support:** Provide the named starter and a short picture checklist. Keep one working interaction as the goal and pair pupils for reading and testing. **Extension:** Ask pupils to improve instructions or add one small feature only after the core game works and has been tested.
2	6 May 2027	By the end of this lesson, students will be able to add a response when fruit is caught and	**H:** Ask what should happen when the fruit touches the basket.	**Support:** Provide the named starter and a short picture checklist. Keep one working interaction as the goal and

		improve a simple catching game.	**ID:** Review collision sensing using the prepared starter; pupils need a visible response and a restart, not extra features. **WD:** Complete the touching basket check to play a sound and return the fruit to the top, then test a catch and a miss. **YD:** Pupils add the catch response, test several attempts and choose a suitable fall speed; a score is an optional extension. **C:** Check that catches produce feedback and that both catches and misses allow play to continue.	pair pupils for reading and testing. **Extension:** Ask pupils to improve instructions or add one small feature only after the core game works and has been tested.

MATERIALS NEEDED FOR THE WEEK

- Teacher-designed Scratch game; related skills in Student Book 2 Units 3-4
- Teacher computer and display
- Scratch 3, school-managed access or offline editor, and a class save folder
- Movement cards, block cards and the named starter project where required
- Whiteboard and markers
- Student notebooks, pencils and colouring materials
- Prepared examples and the lesson success checklist

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
