LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to describe how labelled examples can help an AI system recognise a category. They will also learn to identify an incorrect AI prediction and explain why a person should check it. Through teacher demonstrations, discussion and practical activities, students will practise these skills and explain their ideas.

End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Ask pupils to explain why showing several different examples is more helpful than repeating one picture. Check that pupils question an incorrect result and describe a sensible human check. Note pupils who need further guided practice.

LESSON SLOTS - MONDAY AND THURSDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	24 May 2027	By the end of this lesson, students will be able to describe how labelled examples can help an AI system recognise a category.	**H:** Show several different fish pictures and ask which features help us group them. **ID:** Explain learning from examples using a paper sorting analogy; make clear that pupils sorting cards is a model of the idea, not a real AI system. **WD:** Label varied fish and not-fish picture cards, then use a prepared teacher demonstration or results to show how example choices can affect a model. **YD:** Pupils choose and label a varied set of toy or animal pictures and predict how a new example might be classified. **C:** Ask pupils to explain why showing several different examples is more helpful than repeating one picture.	**Support:** Use fictional examples, concrete pictures and adult reading. Accept a spoken or drawn explanation and keep all demonstrations teacher-led. **Extension:** Ask pupils to suggest a difficult example and explain why a person should check the result.
2	27 May 2027	By the end of this lesson,	**H:** Show a fictional	**Support:** Use fictional

		students will be able to identify an incorrect AI prediction and explain why a person should check it.	prediction that labels a fish-shaped toy as a real fish. **ID:** Explain that an AI guess can be wrong, especially with unfamiliar or unhelpful examples; confidence is not the same as truth. **WD:** Compare prepared predictions with the correct labels and model checking the picture before accepting a result. **YD:** Pairs mark correct and incorrect predictions on a small result sheet and suggest another useful example. **C:** Check that pupils question an incorrect result and describe a sensible human check.	examples, concrete pictures and adult reading. Accept a spoken or drawn explanation and keep all demonstrations teacher-led. **Extension:** Ask pupils to suggest a difficult example and explain why a person should check the result.

MATERIALS NEEDED FOR THE WEEK

- Teacher-designed AI activities using fictional examples and non-personal pictures
- Teacher computer and display
- Printed animal or toy picture cards, prepared labels and example predictions
- AI4K12 K-2 guidance: https://ai4k12.org/gradeband-progression-charts/
- Whiteboard and markers
- Student notebooks, pencils and colouring materials
- UNICEF AI and children guidance: https://www.unicef.org/innocenti/reports/policy-guidance-ai-children

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
