LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to identify information that should stay private and ask a trusted adult before using an unfamiliar AI tool. They will also learn to design a simple AI helper and explain one use, one limitation and a need for adult help. Through teacher demonstrations, discussion and practical activities, students will practise these skills and explain their ideas.

End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Ask each pupil to name one protected detail and demonstrate the safe action without sharing real information. Ask pupils to state what the helper could do, what it might get wrong and who should check it. Note pupils who need further guided practice.

LESSON SLOTS - MONDAY AND THURSDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	7 June 2027	By the end of this lesson, students will be able to identify information that should stay private and ask a trusted adult before using an unfamiliar AI tool.	**H:** Present a fictional AI app asking for a child's photograph and home address. **ID:** Explain that pupils do not need to share names, photographs, voices, passwords or addresses for these activities. Use teacher-led demonstrations and non-personal objects. **WD:** Model declining the fictional request and asking a trusted adult; compare it with safely sorting prepared toy pictures. **YD:** Pupils practise responses to fictional requests and make a short stop-and-ask reminder. **C:** Ask each pupil to name one protected detail and demonstrate the safe action without sharing real information.	**Support:** Use fictional examples, concrete pictures and adult reading. Accept a spoken or drawn explanation and keep all demonstrations teacher-led. **Extension:** Ask pupils to suggest a difficult example and explain why a person should check the result.

2	10 June 2027	By the end of this lesson, students will be able to design a simple AI helper and explain one use, one limitation and a need for adult help.	**H:** Ask what a classroom picture-sorting helper might help a teacher do. **ID:** Explain the design task: draw a useful helper, show examples it would need and include a person who checks its guesses. **WD:** Sketch a helper that sorts pictures of classroom supplies; add varied examples and a note that people check uncertain results. **YD:** Pupils draw and label their own helper, explain the examples needed and add a privacy or checking rule. **C:** Ask pupils to state what the helper could do, what it might get wrong and who should check it.	**Support:** Use fictional examples, concrete pictures and adult reading. Accept a spoken or drawn explanation and keep all demonstrations teacher-led. **Extension:** Ask pupils to suggest a difficult example and explain why a person should check the result.

MATERIALS NEEDED FOR THE WEEK

- Teacher-designed AI activities using fictional examples and non-personal pictures
- Teacher computer and display
- Printed animal or toy picture cards, prepared labels and example predictions
- AI4K12 K-2 guidance: https://ai4k12.org/gradeband-progression-charts/
- Whiteboard and markers
- Student notebooks, pencils and colouring materials
- UNICEF AI and children guidance: https://www.unicef.org/innocenti/reports/policy-guidance-ai-children

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
