

Teacher:	Ray Joshua Balingkit	**Subject:**	Media Studies
Week:	4 (Term 1)	**Year:**	10–11
Link:		**Cover:**	

LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will develop their understanding of camera framing and composition as choices that direct attention and shape meaning. They will distinguish shot size from camera angle and explain what a particular view reveals or withholds. Students will then produce and annotate a short photographic sequence, using audience feedback to improve its clarity while following classroom equipment and permission routines.

End-of-Week Assessment/Check: How will you know they got it?

Teacher questioning, class discussion, analysis of worked examples and the completed independent activities. Check that students use accurate terminology, select specific evidence and explain how a choice creates meaning or addresses an audience. Review the written, visual or practical work alongside its annotations, and use the final checks in both lessons to identify the next skill requiring practice.

LESSON SLOTS - TUESDAY AND FRIDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	15 September 2026	By the end of this lesson, students will be able to identify camera framing and composition choices and explain how they direct audience attention.	**H:** Display a wide view and a close-up of the same ordinary object or scene. Ask what each shot allows the viewer to notice and what information becomes unavailable when the frame changes. **ID:** Introduce long shot, medium shot, close-up and establishing shot, together with high and low camera angles. Explain framing, subject placement, background and space within the image. Discuss how these choices may suggest a relationship or mood, while avoiding fixed claims that an angle always creates one meaning. **WD:** Analyse a teacher-made sequence showing a person noticing a misplaced object. Identify the setting shot, the detail shot and the reaction. Model how changing subject position or the	**Support:** Provide labelled shot examples, a distance-and-angle reference and an annotation frame. Let students physically mark the edges of a frame on a printed image before describing the effect. Model one evidence-based explanation. **Extension:** Students compare two compositions that use the same shot size but create different emphasis. They explain how background detail, empty space or subject placement changes the interpretation.

			background alters emphasis, and distinguish a camera angle from the distance between camera and subject. **YD:** Students label a small set of images and explain the purpose of three framing or composition choices. They then sketch two alternative framings of one situation and annotate what the audience would learn from each version. Pairs check that the terms match what is actually visible. **C:** Ask students to compare a close-up and a low-angle shot and explain why the terms describe different aspects of an image. Check that their annotations connect a visible choice to audience attention or interpretation.	
2	18 Septemb er 2026	By the end of this lesson, students will be able to create a photographic shot sequence that communicates a simple event through deliberate framing.	**H:** Revisit a storyboard from Week 3 and ask which moment needs a wide view and which needs a detail or reaction. Discuss what viewers would misunderstand if every photograph used the same framing. **ID:** Explain how a photographic sequence combines individual shots to communicate an event. Review the approved camera terms and establish a practical routine: plan first, work in the designated area, keep equipment secure and obtain permission before including identifiable people. Use objects or teacher-provided images where permission is unavailable. **WD:** Demonstrate a short object-based sequence showing a missing item being found. Capture or arrange an establishing	**Support:** Provide a simple object-based scenario, a shot checklist and a small set of image placeholders. Assign clear photographer and sequence-planner roles, then exchange roles. Offer a prepared image bank if equipment or permissions prevent original photography. **Extension:** Students create two versions of one shot and compare their effects on audience knowledge. They justify a deliberate use of off-screen space or restricted information while maintaining an understandable sequence.

			image, a detail and a final revealing image. Check the screen for clarity, distracting backgrounds and continuity before deciding whether another photograph is needed. **YD:** Pairs produce a four-to-six-image sequence using varied framing. They arrange the photographs in order and add notes explaining three choices. Another pair describes the event from the images alone; students revise an unclear shot and save the ordered sequence in the class folder. **C:** Review whether the sequence communicates the intended event without relying on captions to repair missing images. Ask each student to justify a framing choice and identify one change made after audience feedback.

MATERIALS NEEDED FOR THE WEEK

- GCSE Media Studies for AQA (Heinemann): Unit 1 Film: Audience positioning and camera terms; Unit 9: Making a video
- Teacher computer, display screen and speakers where audio is used
- Age-appropriate teacher-selected extracts or teacher-prepared fictional media texts
- Prepared analysis worksheet, evidence grid or production brief
- Paper, pencils, storyboard or design templates, and whiteboard markers
- Classroom computers and save folders; camera or approved image bank when required
- Lesson success criteria and teacher observation checklist

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
