LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will investigate how sound and editing work with images to influence meaning and audience response. They will identify dialogue, music, effects, ambient sound and common transitions, connecting these choices to particular moments. Students will develop a written analysis that explains how techniques combine to establish mood or guide attention, using precise evidence and recognising that audience responses may vary.

End-of-Week Assessment/Check: How will you know they got it?

Teacher questioning, class discussion, analysis of worked examples and the completed independent activities. Check that students use accurate terminology, select specific evidence and explain how a choice creates meaning or addresses an audience. Review the written, visual or practical work alongside its annotations, and use the final checks in both lessons to identify the next skill requiring practice.

LESSON SLOTS - TUESDAY AND FRIDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	22 September 2026	By the end of this lesson, students will be able to explain how sound and editing choices contribute to meaning and audience response.	**H:** Play or describe the same neutral sequence with two different teacher-prepared soundtracks. Ask which details in the images stayed the same and why the suggested mood changed when the sound changed. **ID:** Introduce dialogue, music, effects and ambient sound, distinguishing sounds within the story world from music added for the audience. Explain cuts, fades, dissolves and the pace created by shot duration. Discuss sound and editing as choices that guide attention and interpretation, rather than decorative additions. **WD:** Use a short age-appropriate sequence to identify a sound cue and a transition. Model a table recording the observable technique, the exact moment and a possible	**Support:** Provide a glossary, a log with one entry completed and a limited set of techniques to locate. Replay short sections separately for sound and image. Use sentence starters linking a technique to a moment and a suggested response. **Extension:** Students explain how an alternative soundtrack or transition could change the same sequence. They evaluate whether a technique reinforces or challenges the expectation established by the images.

			effect. Compare a rapid sequence of cuts with a longer-held shot and explain how the relationship between sound and image matters. **YD:** Students annotate a prepared sequence using a sound-and-editing log. They identify at least two sound choices and two editing choices, then explain how a combination contributes to mood or suspense. Pairs compare interpretations and improve any statement that only says a technique is “effective”. **C:** Ask students to distinguish naming a technique from analysing its effect. Check that their explanations refer to a specific moment and explain how the sound or editing works with the images.	
2	25 Septemb er 2026	By the end of this lesson, students will be able to analyse how sound and editing combine to shape an audience’s experience of a sequence.	**H:** Show an annotated analysis that names many techniques but does not explain them. Ask what is missing and how a reader could check whether the claimed audience effect is supported. **ID:** Explain how to build an analysis around a specific moment, a combination of techniques and a reasoned audience response. Distinguish the intended effect from a guaranteed reaction. Encourage students to consider rhythm, the relationship between shots and the information that music or silence supplies. **WD:** Model a paragraph about a fictional discovery scene: a detail shot is followed by a reaction while the soundtrack becomes quiet. Explain how the order and sound	**Support:** Provide a paragraph structure using technique, evidence, explanation and audience. Offer a timeline of the sequence and prompt students to select one significant moment before attempting a longer response. **Extension:** Students compare two possible edits and judge which better supports a stated purpose. They discuss how an audience with different genre knowledge could interpret the same sound cue differently.

			change focus attention on the discovery. Compare this with an alternative edit that reveals the information earlier. **YD:** Students independently analyse a second short sequence or a prepared shot-and-sound description. They write two connected paragraphs using precise evidence from both sound and editing. A partner checks the technical terms and highlights any claim requiring a clearer explanation before revision. **C:** Invite students to explain how two techniques work together at one moment. Collect their analyses and check for specific evidence, a logical interpretation and qualified audience language rather than a list of disconnected features.

4				Support: Extension:

MATERIALS NEEDED FOR THE WEEK

- GCSE Media Studies for AQA (Heinemann): Unit 9: Making a video, post-production, sound and editing
- Teacher computer, display screen and speakers where audio is used
- Age-appropriate teacher-selected extracts or teacher-prepared fictional media texts
- Prepared analysis worksheet, evidence grid or production brief
- Paper, pencils, storyboard or design templates, and whiteboard markers
- Classroom computers and save folders; camera or approved image bank when required
- Lesson success criteria and teacher observation checklist

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
