LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will consolidate film language, genre, narrative, framing, sound, editing and representation through a mock assessment and a structured review. They will identify the difference between a supported interpretation and a general description, correct their own work and apply the feedback to a new example. The two lessons will prepare students for the internal school assessment by making individual strengths and remaining learning needs clear.

End-of-Week Assessment/Check: How will you know they got it?

Compare each student's original mock, annotated corrections and new independent response. Check that a correction explains the cause of the problem and that the student can apply the same reasoning to another text or design decision. Record a specific learning need for focused preparation before assessment week.

LESSON SLOTS - TUESDAY AND FRIDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	6 October 2026	By the end of this lesson, students will be able to complete a mock assessment and identify strengths and gaps in the taught media skills.	**H:** Revisit the success criteria for an evidence-based analysis and ask students what a reader needs in addition to the name of a technique. Explain that the mock will identify learning needs before assessment week. **ID:** Outline a short mock covering film genre, narrative, camera framing, sound and editing, representation and evidence-based analysis. Explain the difference between independent mock work and the guided review that follows. Students should retain their first responses so that later corrections show how their reasoning has changed. **WD:** Read the task requirements together and identify the evidence to submit: a completed analysis, a comparison where required and a short production plan.	**Support:** Provide clear task instructions, readable texts and agreed classroom access support. During feedback, use a vocabulary guide or a feature-evidence-meaning table targeted to the misconception. Keep the original independent mock separate from supported corrections. **Extension:** Students identify a plausible alternative interpretation and test it against the available evidence. They explain why an apparently confident response may still be weak if the evidence does not support the claim.

			Check understanding of the instructions without analysing the mock texts or suggesting which interpretation students should choose. **YD:** Students complete the mock questions and a brief planning task independently. They mark any uncertain response and check that evidence supports each interpretation. Collect their original work, then use the criteria to identify whether the main difficulty concerns terminology, evidence, explanation or meeting the production brief. **C:** Ask students to identify one response they can justify and one they need to review. Record individual learning needs from the mock and select anonymous examples for the next lesson, keeping the feedback focused on a specific skill.	
2	9 October 2026	By the end of this lesson, students will be able to use feedback to correct a media response and apply the same skill to a different example.	**H:** Display an anonymous mock response that describes a feature without explaining it. Ask what is missing and how the writer could connect the observation to meaning, audience or the task brief. **ID:** Review the common misconceptions identified in the mock. Distinguish inaccurate terminology, unsupported inference, description without analysis and production choices that do not match the brief. Explain that a useful correction includes the reason for the change and must be tested on another example. **WD:** Model a correction using a similar text rather than simply giving the original answer. Add	**Support:** Group students by the learning need shown in their mock. Provide a short worked example, a paragraph frame or an annotation checklist, then remove the scaffold for the new question. Use oral rehearsal to support the written explanation. **Extension:** Students evaluate two possible corrections and justify which responds more directly to the question. They retain a plausible alternative reading where evidence supports it and explain the limitation of their own judgement.

			precise evidence, explain its significance and qualify an overstatement. For the production task, show how a proposed change can be checked against the audience or purpose stated in the brief. **YD:** Students annotate and improve their mock responses, explaining why each significant correction is needed. They then complete a short independent analysis of a new example or a revised design decision. Partners check evidence against the criteria, and students record a specific action for assessment preparation. **C:** Compare the original response, the correction and the new independent attempt. Ask students to explain the rule or reasoning they have applied, and record any misconception that still requires a further model before assessment week.

MATERIALS NEEDED FOR THE WEEK

- GCSE Media Studies for AQA (Heinemann): taught Film, Television sections
- Teacher computer, display screen and speakers where audio is used
- Age-appropriate teacher-selected extracts or teacher-prepared fictional media texts
- Prepared mock tasks and feedback criteria
- Paper, pencils, storyboard or design templates, and whiteboard markers
- Classroom computers and save folders; camera or approved image bank when required
- Lesson success criteria and teacher observation checklist

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
