Teacher:	Ray Joshua Balingkit	**Subject:**	Design & Technology
Week:	15 (Term 1)	**Year:**	10–11
Link:		**Cover:**	

LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will demonstrate the selected taught design and technology outcomes through independent internal school knowledge and design tasks. They will interpret a brief, use evidence, communicate a reasoned proposal and submit the required test or trace information. The assessment will identify achievement and the particular concepts or design skills needing follow-up.

End-of-Week Assessment/Check: How will you know they got it?

Use the prepared school criteria to assess accurate concepts, relevant evidence, justified decisions and how well the design meets its brief. Collect the original individual responses, annotated drawings or model evidence and test records. Record authorised support and identify specific follow-up learning needs.

LESSON SLOTS - TUESDAY AND WEDNESDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	1 December 2026	By the end of this lesson, students will be able to demonstrate independent understanding of the taught design and technology concepts.	**H:** Distribute the prepared internal school assessment and check the agreed access arrangements. Ask students to read the instructions and identify the response evidence they must submit. **ID:** Explain that the assessment covers user needs, product analysis, emerging technologies, lifecycle choices, energy, materials and mechanical devices, electronic systems, programmable control and measurable specifications. Clarify permitted resources, the requirement to justify decisions and the submission arrangements. Questions should assess the selected taught outcomes rather than untaught specialist manufacturing knowledge. **WD:** Check access to diagrams, case information and writing materials. Clarify administrative instructions	**Support:** Apply agreed access arrangements and clarify instructions only. Record authorised assistance without providing assessed terminology, interpreting a diagram or recommending a solution. **Extension:** Within the same taught criteria, students explain a limitation or alternative solution with supporting evidence. Credit the quality of reasoning rather than additional untaught content.

			without explaining an assessed mechanism, suggesting a material choice or solving a question for students. **YD:** Students independently complete the prepared knowledge, diagram and product-case questions. They label systems accurately, use supplied evidence and justify design decisions against a stated need. They check that their answers address each requirement and submit all response sheets. **C:** Collect responses and check for missing pages. Assess accurate concepts, use of evidence and justified decisions using the prepared school criteria. Record individual misconceptions for feedback after assessment.	
2	2 December 2026	By the end of this lesson, students will be able to apply the taught design skills independently to a defined school assessment brief.	**H:** Issue the individual design brief and check access to the approved paper modelling or drawing materials. Confirm required planning, testing and justification evidence before work begins. **ID:** Explain that students must analyse a user need and communicate a suitable proposal using the taught skills. The first assessment uses a simple mechanism or material-based design; the later assessment may include an input-process-output plan, control flowchart and measurable specification. Use the prepared brief and school criteria. **WD:** Clarify how the supplied components, diagrams or templates should be used and submitted. Check administrative	**Support:** Use agreed accessible materials and recorded administrative assistance. Keep assessed design decisions individual. Use paper diagrams where equivalent to the brief rather than introducing unfamiliar equipment during assessment. **Extension:** Students justify a trade-off between feasible alternatives or explain how a changed condition would affect their proposal, staying within the same brief and assessment criteria.

			understanding without demonstrating the assessed design or telling students which decisions to make. **YD:** Students independently develop the required annotated design or low-risk paper model. They justify choices against the user need, record the requested test or trace evidence and identify a limitation. They check their evidence against the brief and submit planning, final work and evaluation together. **C:** Collect the complete individual evidence. Assess how well the proposal meets the brief, the accuracy of its explanation and the relevance of its testing. Record the specific design skill requiring further teaching.	
3				Support: Extension:
4				Support: Extension:

MATERIALS NEEDED FOR THE WEEK

- Pearson Edexcel GCSE (9–1) Design and Technology revision notes: selected taught Core content sections
- Teacher computer, display screen and whiteboard markers
- Prepared product scenarios, diagrams and user briefs aligned to the lesson objectives
- Prepared internal school assessment tasks and individual design briefs
- Paper, pencils, rulers, card templates and approved classroom stationery
- Teacher-prepared samples or component cards; pre-cut model parts where required
- Lesson success criteria, observation checklist and labelled evidence folders

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
