Game 1 Catch the Character

Term 3 | Week 1 | Pupil guide with teacher support

What you will make

Click the character to catch it. It moves to a new place after each catch.

Get ready

One sprite named Catcher and a plain backdrop.

Lesson 1 Start building

1. Open a new Scratch project. Choose one animal sprite. Rename it **Catcher**.

2. Choose a plain backdrop. Set the sprite Size box to **60**.

3. Name the project **Y1 Game 1 Catch the Character**.

Save your project before moving on. Use your school account or File > Save to your computer.

Build the scripts

Select the named sprite first. In the Code tab, join the blocks in the order shown. Each separate stack starts with its own yellow event block. The boxes below are block-order diagrams, not editor screenshots.

Catcher - reset

Catcher - catch

Lesson 2 Finish and test

Finish any missing scripts. Press the green flag, then play with a partner. Take turns testing and explaining.

Check	What should happen
Start	Click the green flag. The character appears on the stage.
Catch	Click the character and release. The message appears, then it jumps.
Repeat	Catch it three times without dragging it.
Restart	Click the green flag. The game is ready again.

Find and fix

If the sprite never moves, check the Motion block is attached below the message block.

If nothing happens, check that the click script begins with when this sprite clicked and belongs to Catcher.

Explain your game

Point to the event that starts your code. Say what happens next. Show one thing you changed.

Optional extra

Change the message or choose a new backdrop. An adult can help add a score later.

Teacher support

Model one stack at a time. Supply prepared sprites or scripts when needed. Read the messages aloud and let pupils demonstrate their learning orally. Keep scores and timers optional.
