Game 3 Reach the Finish

Term 3 | Week 3 | Pupil guide with teacher support

What you will make

Use the arrow keys to move the player to the finish.

Get ready

A Player sprite and a Finish sprite on a plain backdrop. The teacher helps with the finish-check script.

Lesson 1 Start building

1. Create a new project. Choose a small sprite and rename it **Player**. Set Size to **40**.

2. Add a second sprite. Rename it exactly **Finish**. Choose a simple shape and set Size to **50**.

3. Select Finish. Set its x box to **180** and y box to **0**. Rename the project **Y1 Game 3 Reach the Finish**.

Save your project before moving on. Use your school account or File > Save to your computer.

Build the scripts

Select the named sprite first. In the Code tab, join the blocks in the order shown. Each separate stack starts with its own yellow event block. The boxes below are block-order diagrams, not editor screenshots.

Finish - position

```
when green flag clicked
go to x: (180) y: (0)
show
```

Player - reset and finish check

```
when green flag clicked
go to x: (-180) y: (0)
show
forever
    if <touching (Finish) ?> then
        say [I reached the finish!] for (2) seconds
        stop (all)
```

Player - right

```
when (right arrow) key pressed
change x by (10)
```

Player - left

```
when (left arrow) key pressed
change x by (-10)
```

Player - up

```
when (up arrow) key pressed
change y by (10)
```

Player - down

```
when (down arrow) key pressed
change y by (-10)
```

Lesson 2 Finish and test

Finish any missing scripts. Press the green flag, then play with a partner. Take turns testing and explaining.

Check	What should happen
Move	Start. Press each arrow key. Check all four directions.
Finish	Move Player into Finish. The message appears and the game stops.
Restart	Click the green flag. Player returns to the left.
Fair route	Check there is a clear route and neither sprite is oversized.

Find and fix

If the message never appears, check the sensing dropdown says Finish, with exactly the same sprite name.

If an arrow moves the wrong way, check whether x or y changes and whether the number is positive or negative.

Explain your game

Point to the event that starts your code. Say what happens next. Show one thing you changed.

Optional extra

Draw a path on the backdrop. First use it as a visual route; collision with path edges is not required.

Teacher support

Model one stack at a time. Supply prepared sprites or scripts when needed. Read the messages aloud and let pupils demonstrate their learning orally. Keep scores and timers optional.
