LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to label examples by shape and explain that the examples given to a system can affect its predictions. They will also learn to test a prediction against a known answer and suggest adding more varied examples when a prediction is wrong. Through class discussion, teacher demonstrations and practical activities, students will practise these skills and explain their ideas.

End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Check the specific outcomes in each lesson row and note pupils who need further practice.

LESSON SLOTS - MONDAY AND THURSDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	24 May 2027	By the end of this lesson, students will be able to label examples by shape and explain that the examples given to a system can affect its predictions.	**H:** Sort a circle and a triangle together. Ask pupils to explain which visible feature helped them decide. **ID:** Explain that labels tell us which group an example belongs to. Some AI systems are built by learning patterns from many labelled examples. Our paper activity represents this idea; it is not a real AI system. **WD:** Use training cards A1-A4 from the reference. Label each circle or triangle. Notice that all the circles shown are red and all the triangles are blue. Ask whether colour is always enough to decide shape. Keep test cards aside. **YD:** Pairs label the four examples and describe a possible sorting rule. Give each pair a different-coloured circle to discuss. Model how more varied examples can show that colour and shape are different features.	**Support:** Give two clear shape labels and let pupils trace each shape. Use fewer cards and repeat the group names. **Extension:** Ask pupils to draw a new example that would help someone who was relying only on colour.

			C: Each pupil completes “Good examples should include...” using a card or oral response. Record whether the pupil uses shape rather than just colour.	
2	27 May 2027	By the end of this lesson, students will be able to test a prediction against a known answer and suggest adding more varied examples when a prediction is wrong.	**H:** Recall the red circles and blue triangles. Show the blue-circle test card without giving its label. Ask pupils what someone relying only on colour might predict. **ID:** Explain that a prediction is a suggested answer and it may be wrong. Checking new examples helps people find mistakes. A wrong answer does not become correct because a computer suggested it. **WD:** Model the deliberate “colour-only” guess on T1, then count the sides and check the shape. Contrast it with a shape-based guess. Make clear that pupils are testing a classroom analogy, not measuring a trained computer. **YD:** Pairs use test cards T1-T4, recording a guess and the checked shape. Add new varied training cards, then discuss which examples helped. If available, the teacher may briefly demonstrate the fish/not-fish stage of AI for Oceans using the teacher’s device only. **C:** Ask pupils to identify one mistake and explain how a person checked it. Collect the prediction table and listen for the idea that examples and human checking matter.	**Support:** Use the first two test cards, allow drawing or pointing and check the shapes together. **Extension:** Ask pupils to explain why changing the examples may improve results but does not promise that every future prediction will be right.

MATERIALS NEEDED FOR THE WEEK

- Y1 Computing T3 W06 Lesson Reference.pdf
- Teacher computer and display
- Weekly AI pupil reference and teacher answers
- Training cards A1-A4, test cards T1-T4 and recording table
- Classroom computers or laptops
- Drawing paper or activity sheets
- Pencils and colouring materials; Sources: Day of AI, Code.org and UNICEF; links in the weekly reference

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
