LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to explain course expectations and follow classroom routines. They will also learn to explain what an algorithm is and interpret ordered instructions. Teacher demonstrations, guided examples and practical tasks will help students explain and apply these ideas.

End-of-Week Assessment/Check: How will you know they got it?

Teacher questioning, class discussion, the completed textbook activities and the final checks in both lessons. Explain two classroom routines and locate the saved folder. State why an algorithm must be precise and predict its result. Review completed work and use the final checks to identify misconceptions.

LESSON SLOTS - MONDAY & FRIDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	24 August 2026	By the end of this lesson, students will be able to explain course expectations and follow classroom routines.	**H:** Recall prior learning with a short question or prediction linked to the lesson topic (5 minutes). **ID:** Demonstrate logging in, naming files and saving to the class folder. Use textbook pages 4-11 and explain the relevant vocabulary (10 minutes). **WD:** Complete a second example together. Ask students to explain each step and check for misconceptions (10 minutes). **YD:** Create a named course folder and record classroom and equipment-care rules. Record the solution and check it against the task requirements (15 minutes). **C:** Explain two classroom routines and locate the saved folder (5 minutes).	**Support:** Provide a vocabulary guide, a worked example and a partially completed task. Use prompts and paired rehearsal before independent work. **Extension:** Apply the concept to a new example, justify the choices and explain a limitation or alternative solution.

2	28 August 2026	By the end of this lesson, students will be able to explain what an algorithm is and interpret ordered instructions.	**H:** Recall prior learning with a short question or prediction linked to the lesson topic (5 minutes). **ID:** Walk through a familiar route algorithm and identify its inputs, steps and result. Use textbook pages 4-11 and explain the relevant vocabulary (10 minutes). **WD:** Complete a second example together. Ask students to explain each step and check for misconceptions (10 minutes). **YD:** Interpret two textbook algorithms and explain their purpose in everyday language. Record the solution and check it against the task requirements (15 minutes). **C:** State why an algorithm must be precise and predict its result (5 minutes).	**Support:** Provide a vocabulary guide, a worked example and a partially completed task. Use prompts and paired rehearsal before independent work. **Extension:** Apply the concept to a new example, justify the choices and explain a limitation or alternative solution.

MATERIALS NEEDED FOR THE WEEK

- Pearson Edexcel International GCSE Computer Science Student Book, printed pages 4-11
- Teacher computer and classroom display
- Student notebooks, algorithm worksheets and drawing materials
- Relevant textbook examples, activities and questions

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
