LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to explain and trace the sorting methods presented in the textbook. They will also learn to compare sorting methods using trace evidence. Teacher demonstrations, guided examples and practical tasks will help students explain and apply these ideas.

End-of-Week Assessment/Check: How will you know they got it?

Teacher questioning, class discussion, the completed textbook activities and the final checks in both lessons. Show the list after a specified pass and justify each change. Use a trace to explain a difference between the methods. Review completed work and use the final checks to identify misconceptions.

LESSON SLOTS - MONDAY & FRIDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	14 September 2026	By the end of this lesson, students will be able to explain and trace the sorting methods presented in the textbook.	**H:** Recall prior learning with a short question or prediction linked to the lesson topic (5 minutes). **ID:** Model the textbook sorting passes on a short unsorted list. Use textbook pages 15-22 and explain the relevant vocabulary (10 minutes). **WD:** Complete a second example together. Ask students to explain each step and check for misconceptions (10 minutes). **YD:** Trace the sorting methods step by step, recording comparisons and changes. Record the solution and check it against the task requirements (15 minutes). **C:** Show the list after a specified pass and justify each change (5 minutes).	**Support:** Provide a vocabulary guide, a worked example and a partially completed task. Use prompts and paired rehearsal before independent work. **Extension:** Apply the concept to a new example, justify the choices and explain a limitation or alternative solution.

2	18 September 2026	By the end of this lesson, students will be able to compare sorting methods using trace evidence.	**H:** Recall prior learning with a short question or prediction linked to the lesson topic (5 minutes). **ID:** Compare the textbook methods on the same list and record their steps. Use textbook pages 15-22 and explain the relevant vocabulary (10 minutes). **WD:** Complete a second example together. Ask students to explain each step and check for misconceptions (10 minutes). **YD:** Trace a second list, compare the methods and explain their operation. Record the solution and check it against the task requirements (15 minutes). **C:** Use a trace to explain a difference between the methods (5 minutes).	**Support:** Provide a vocabulary guide, a worked example and a partially completed task. Use prompts and paired rehearsal before independent work. **Extension:** Apply the concept to a new example, justify the choices and explain a limitation or alternative solution.

MATERIALS NEEDED FOR THE WEEK

- Pearson Edexcel International GCSE Computer Science Student Book, printed pages 15-22
- Teacher computer and classroom display

- Student notebooks, algorithm worksheets and drawing materials
- Relevant textbook examples, activities and questions

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
