LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to explain and trace the searching methods presented in the textbook. They will also learn to compare searching methods and select a suitable method. Teacher demonstrations, guided examples and practical tasks will help students explain and apply these ideas.

End-of-Week Assessment/Check: How will you know they got it?

Teacher questioning, class discussion, the completed textbook activities and the final checks in both lessons. Explain when the search stops and report the result. Explain how data order affects the method selected. Review completed work and use the final checks to identify misconceptions.

LESSON SLOTS - MONDAY & FRIDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	21 September 2026	By the end of this lesson, students will be able to explain and trace the searching methods presented in the textbook.	**H:** Recall prior learning with a short question or prediction linked to the lesson topic (5 minutes). **ID:** Model searching for a value, including the sorted-data requirement where needed. Use textbook pages 15-22 and explain the relevant vocabulary (10 minutes). **WD:** Complete a second example together. Ask students to explain each step and check for misconceptions (10 minutes). **YD:** Trace searches for values that are present and absent. Record the solution and check it against the task requirements (15 minutes). **C:** Explain when the search stops and report the result (5 minutes).	**Support:** Provide a vocabulary guide, a worked example and a partially completed task. Use prompts and paired rehearsal before independent work. **Extension:** Apply the concept to a new example, justify the choices and explain a limitation or alternative solution.

2	25 September 2026	By the end of this lesson, students will be able to compare searching methods and select a suitable method.	**H:** Recall prior learning with a short question or prediction linked to the lesson topic (5 minutes). **ID:** Compare searches on ordered and unordered lists. Use textbook pages 15-22 and explain the relevant vocabulary (10 minutes). **WD:** Complete a second example together. Ask students to explain each step and check for misconceptions (10 minutes). **YD:** Choose and justify a search method for supplied data, then trace it. Record the solution and check it against the task requirements (15 minutes). **C:** Explain how data order affects the method selected (5 minutes).	**Support:** Provide a vocabulary guide, a worked example and a partially completed task. Use prompts and paired rehearsal before independent work. **Extension:** Apply the concept to a new example, justify the choices and explain a limitation or alternative solution.

MATERIALS NEEDED FOR THE WEEK

- Pearson Edexcel International GCSE Computer Science Student Book, printed pages 15-22
- Teacher computer and classroom display

- Student notebooks, algorithm worksheets and drawing materials
- Relevant textbook examples, activities and questions

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
