LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to use variables and suitable data types in a short program. They will also learn to use operators and expressions and explain program execution. Teacher demonstrations, guided examples and practical tasks will help students explain and apply these ideas.

End-of-Week Assessment/Check: How will you know they got it?

Teacher questioning, class discussion, the completed textbook activities and the final checks in both lessons. Explain a variable value and justify its data type. Explain an expression and correct an unexpected result. Review completed work and use the final checks to identify misconceptions.

LESSON SLOTS - MONDAY & FRIDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	26 October 2026	By the end of this lesson, students will be able to use variables and suitable data types in a short program.	**H:** Recall prior learning with a short question or prediction linked to the lesson topic (5 minutes). **ID:** Model declaration or assignment, changing values and choosing data types. Use textbook pages 34-50 and explain the relevant vocabulary (10 minutes). **WD:** Complete a second example together. Ask students to explain each step and check for misconceptions (10 minutes). **YD:** Write and run a program that stores and updates values of suitable types. Record the solution and check it against the task requirements (15 minutes). **C:** Explain a variable value and justify its data type (5 minutes).	**Support:** Provide a vocabulary guide, a worked example and a partially completed task. Use prompts and paired rehearsal before independent work. **Extension:** Apply the concept to a new example, justify the choices and explain a limitation or alternative solution.

2	30 October 2026	By the end of this lesson, students will be able to use operators and expressions and explain program execution.	**H:** Recall prior learning with a short question or prediction linked to the lesson topic (5 minutes). **ID:** Evaluate arithmetic and logical expressions, then run a short program. Use textbook pages 34-50 and explain the relevant vocabulary (10 minutes). **WD:** Complete a second example together. Ask students to explain each step and check for misconceptions (10 minutes). **YD:** Predict expression results, execute the program and compare actual output. Record the solution and check it against the task requirements (15 minutes). **C:** Explain an expression and correct an unexpected result (5 minutes).	**Support:** Provide a vocabulary guide, a worked example and a partially completed task. Use prompts and paired rehearsal before independent work. **Extension:** Apply the concept to a new example, justify the choices and explain a limitation or alternative solution.

MATERIALS NEEDED FOR THE WEEK

- Pearson Edexcel International GCSE Computer Science Student Book, printed pages 34-50
- Teacher computer and classroom display
- Classroom computers with Python 3 editor and individual save folders
- Relevant textbook examples, activities and questions

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
