LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to choose useful keywords and refine a supervised web search. They will also learn to describe crawling, indexing and matching as stages in a simple search-engine model. Through teacher demonstrations, discussion and practical activities, students will practise these skills and explain their ideas.

End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Check pupils connect their keywords to the question and explain why a revision helped. Check pupils explain that a search engine uses an index rather than reading the whole web afresh for each query. Note pupils who need further guided practice.

LESSON SLOTS - WEDNESDAY AND THURSDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	28 October 2026	By the end of this lesson, students will be able to choose useful keywords and refine a supervised web search.	**H:** Compare a broad search for volcano with a question about one volcano's location. **ID:** Introduce Unit 2 Searching the world wide web. Review clear keywords, approved search tools, useful bookmarks and trying a revised query. **WD:** Turn a prepared question into keywords, review screened results and revise the query if it does not answer the question. **YD:** Pupils plan and compare two searches for a teacher-selected geography topic using supervised access or offline results cards. **C:** Check pupils connect their keywords to the question and explain why a revision helped.	**Support:** Provide approved page screenshots, a source checklist and a credit-writing frame. Use short texts and model one step before independent practice. **Extension:** Ask pupils to compare two source choices or queries, explain a limitation and improve the evidence or credit in their work.
2	29 October 2026	By the end of this lesson, students will be able to	**H:** Ask how a search engine can show links	**Support:** Provide approved page screenshots, a source

		describe crawling, indexing and matching as stages in a simple search-engine model.	quickly when there are so many web pages. **ID:** Explain a crawler as software discovering accessible pages, an index as stored information about pages and an algorithm matching a query. Not every page is indexed. **WD:** Use a small linked set of page cards. Collect topic words into an index, then match a new query against that index. **YD:** Groups take crawler, index and search roles and answer queries using the prepared cards. Record the three stages in order. **C:** Check pupils explain that a search engine uses an index rather than reading the whole web afresh for each query.	checklist and a credit-writing frame. Use short texts and model one step before independent practice. **Extension:** Ask pupils to compare two source choices or queries, explain a limitation and improve the evidence or credit in their work.

MATERIALS NEEDED FOR THE WEEK

- Oxford International Primary Computing Student Book 5 printed pages 20-25
- Teacher computer and display
- Class computers with supervised browser access and the class save folder
- Approved web pages, search-result cards, an index model and fact-sheet template
- Whiteboard and markers
- Student notebooks, pencils and prepared vocabulary prompts
- Source checklist, credit-writing frame and teacher-cleared image examples

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
