LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to create a clear algorithm using pseudocode. They will also learn to represent a solution using a flowchart. Teacher demonstrations, guided examples and practical tasks will help students explain and apply these ideas.

End-of-Week Assessment/Check: How will you know they got it?

Teacher questioning, class discussion, the completed textbook activities and the final checks in both lessons. Check that every input has a purpose and the output meets the problem. Explain the decision and verify the arrows lead to a valid end. Review completed work and use the final checks to identify misconceptions.

LESSON SLOTS - MONDAY & FRIDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	07 September 2026	By the end of this lesson, students will be able to create a clear algorithm using pseudocode.	**H:** Recall prior learning with a short question or prediction linked to the lesson topic. **ID:** Turn a short input-process-output problem into ordered pseudocode. Use textbook pages 12-14 and explain the relevant vocabulary. **WD:** Complete a second example together. Ask students to explain each step and check for misconceptions. **YD:** Write pseudocode to calculate a total and choose an appropriate message. Record the solution and check it against the task requirements. **C:** Check that every input has a purpose and the output meets the problem.	**Support:** Provide a vocabulary guide, a worked example and a partially completed task. Use prompts and paired rehearsal before independent work. **Extension:** Apply the concept to a new example, justify the choices and explain a limitation or alternative solution.

2	11 September 2026	By the end of this lesson, students will be able to represent a solution using a flowchart.	**H:** Recall prior learning with a short question or prediction linked to the lesson topic. **ID:** Model start/end, input/output, process and decision symbols. Use textbook pages 12-14 and explain the relevant vocabulary. **WD:** Complete a second example together. Ask students to explain each step and check for misconceptions. **YD:** Draw a flowchart for a simple decision problem and trace both branches. Record the solution and check it against the task requirements. **C:** Explain the decision and verify the arrows lead to a valid end.	**Support:** Provide a vocabulary guide, a worked example and a partially completed task. Use prompts and paired rehearsal before independent work. **Extension:** Apply the concept to a new example, justify the choices and explain a limitation or alternative solution.

MATERIALS NEEDED FOR THE WEEK

- Pearson Edexcel International GCSE Computer Science Student Book, printed pages 12-14
- Teacher computer and classroom display
- Student notebooks, algorithm worksheets and drawing materials
- Relevant textbook examples, activities and questions

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
