LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to use selection and conditions to control a program. They will also learn to use repetition and trace changing program values. Teacher demonstrations, guided examples and practical tasks will help students explain and apply these ideas.

End-of-Week Assessment/Check: How will you know they got it?

Teacher questioning, class discussion, the completed textbook activities and the final checks in both lessons. Explain which branch executes for two different inputs. Explain the stopping condition and identify an off-by-one error. Review completed work and use the final checks to identify misconceptions.

LESSON SLOTS - MONDAY & FRIDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	02 November 2026	By the end of this lesson, students will be able to use selection and conditions to control a program.	**H:** Recall prior learning with a short question or prediction linked to the lesson topic. **ID:** Model an IF/ELSE decision with relational and logical conditions. Use textbook pages 34-50 and explain the relevant vocabulary. **WD:** Complete a second example together. Ask students to explain each step and check for misconceptions. **YD:** Write and test a program with alternative outcomes, including boundary inputs. Record the solution and check it against the task requirements. **C:** Explain which branch executes for two different inputs.	**Support:** Provide a vocabulary guide, a worked example and a partially completed task. Use prompts and paired rehearsal before independent work. **Extension:** Apply the concept to a new example, justify the choices and explain a limitation or alternative solution.

2	06 November 2026	By the end of this lesson, students will be able to use repetition and trace changing program values.	**H:** Recall prior learning with a short question or prediction linked to the lesson topic. **ID:** Model the textbook repetition structures and complete a trace table. Use textbook pages 34-50 and explain the relevant vocabulary. **WD:** Complete a second example together. Ask students to explain each step and check for misconceptions. **YD:** Write a short loop and trace iterations, variable changes and final output. Record the solution and check it against the task requirements. **C:** Explain the stopping condition and identify an off-by-one error.	**Support:** Provide a vocabulary guide, a worked example and a partially completed task. Use prompts and paired rehearsal before independent work. **Extension:** Apply the concept to a new example, justify the choices and explain a limitation or alternative solution.

MATERIALS NEEDED FOR THE WEEK

- Pearson Edexcel International GCSE Computer Science Student Book, printed pages 34-50
- Teacher computer and classroom display
- Classroom computers with Python 3 editor and individual save folders
- Relevant textbook examples, activities and questions

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
