LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to explain how identifiers, layout and comments improve readability. They will also learn to improve code readability while preserving its behaviour. Teacher demonstrations, guided examples and practical tasks will help students explain and apply these ideas.

End-of-Week Assessment/Check: How will you know they got it?

Teacher questioning, class discussion, the completed textbook activities and the final checks in both lessons. Explain how two readability features help another programmer. Show that the revised program produces the same correct output. Review completed work and use the final checks to identify misconceptions.

LESSON SLOTS - MONDAY & FRIDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	09 November 2026	By the end of this lesson, students will be able to explain how identifiers, layout and comments improve readability.	**H:** Recall prior learning with a short question or prediction linked to the lesson topic. **ID:** Compare clear and unclear versions of the same program. Use textbook pages 51-53 and explain the relevant vocabulary. **WD:** Complete a second example together. Ask students to explain each step and check for misconceptions. **YD:** Annotate code to identify meaningful names, indentation and useful comments. Record the solution and check it against the task requirements. **C:** Explain how two readability features help another programmer.	**Support:** Provide a vocabulary guide, a worked example and a partially completed task. Use prompts and paired rehearsal before independent work. **Extension:** Apply the concept to a new example, justify the choices and explain a limitation or alternative solution.

2	13 November 2026	By the end of this lesson, students will be able to improve code readability while preserving its behaviour.	**H:** Recall prior learning with a short question or prediction linked to the lesson topic. **ID:** Refactor a short program and compare its output before and after editing. Use textbook pages 51-53 and explain the relevant vocabulary. **WD:** Complete a second example together. Ask students to explain each step and check for misconceptions. **YD:** Improve a supplied program using consistent names, layout and comments; retest it. Record the solution and check it against the task requirements. **C:** Show that the revised program produces the same correct output.	**Support:** Provide a vocabulary guide, a worked example and a partially completed task. Use prompts and paired rehearsal before independent work. **Extension:** Apply the concept to a new example, justify the choices and explain a limitation or alternative solution.

MATERIALS NEEDED FOR THE WEEK

- Pearson Edexcel International GCSE Computer Science Student Book, printed pages 51-53
- Teacher computer and classroom display
- Classroom computers with Python 3 editor and individual save folders
- Relevant textbook examples, activities and questions

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
