LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to use the string operations presented in the textbook. They will also learn to apply and test string processing in a program. Teacher demonstrations, guided examples and practical tasks will help students explain and apply these ideas.

End-of-Week Assessment/Check: How will you know they got it?

Teacher questioning, class discussion, the completed textbook activities and the final checks in both lessons. Explain one string result and check its index positions. Compare expected and actual results and explain a correction. Review completed work and use the final checks to identify misconceptions.

LESSON SLOTS - MONDAY & FRIDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	16 November 2026	By the end of this lesson, students will be able to use the string operations presented in the textbook.	**H:** Recall prior learning with a short question or prediction linked to the lesson topic. **ID:** Model string access, length and other operations using small examples. Use textbook pages 54-61 and explain the relevant vocabulary. **WD:** Complete a second example together. Ask students to explain each step and check for misconceptions. **YD:** Predict and test textbook string expressions using appropriate indices. Record the solution and check it against the task requirements. **C:** Explain one string result and check its index positions.	**Support:** Provide a vocabulary guide, a worked example and a partially completed task. Use prompts and paired rehearsal before independent work. **Extension:** Apply the concept to a new example, justify the choices and explain a limitation or alternative solution.

2	20 November 2026	By the end of this lesson, students will be able to apply and test string processing in a program.	**H:** Recall prior learning with a short question or prediction linked to the lesson topic. **ID:** Build a short text-processing solution and choose representative tests. Use textbook pages 54-61 and explain the relevant vocabulary. **WD:** Complete a second example together. Ask students to explain each step and check for misconceptions. **YD:** Create a string-processing program and test normal, boundary and invalid cases where relevant. Record the solution and check it against the task requirements. **C:** Compare expected and actual results and explain a correction.	**Support:** Provide a vocabulary guide, a worked example and a partially completed task. Use prompts and paired rehearsal before independent work. **Extension:** Apply the concept to a new example, justify the choices and explain a limitation or alternative solution.

MATERIALS NEEDED FOR THE WEEK

- Pearson Edexcel International GCSE Computer Science Student Book, printed pages 54-61
- Teacher computer and classroom display
- Classroom computers with Python 3 editor and individual save folders
- Relevant textbook examples, activities and questions

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
