LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to describe how computers support work and identify a microprocessor as a part that follows instructions. They will also learn to describe how a microprocessor controls a familiar home device. Through teacher demonstrations, discussion and practical activities, students will practise these skills and explain their ideas.

End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Ask for one useful computer task and one explanation of the microprocessor using the words instructions or control. Check pupils link a device to a specific controlled action and can distinguish a sensor from the processor. Note pupils who need further guided practice.

LESSON SLOTS - MONDAY AND THURSDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	31 August 2026	By the end of this lesson, students will be able to describe how computers support work and identify a microprocessor as a part that follows instructions.	**H:** Ask how a computer helps when researching, writing or sharing school work. **ID:** Introduce Unit 1 Computers around us. Explain that a microprocessor carries out instructions and controls a device; it does not think like a person. **WD:** Match research, writing and communication tasks to useful computer applications, then identify a microprocessor on a prepared diagram. **YD:** Pupils match familiar tasks to computer uses and explain how a microprocessor helps a pictured device work. **C:** Ask for one useful computer task and one explanation of the microprocessor using the words instructions or control.	**Support:** Provide labelled device pictures, a file-and-folder diagram and a short step checklist. Use prepared practice files and allow a spoken explanation before writing. **Extension:** Ask pupils to compare two storage choices, explain a limitation and justify how their folder or version names prevent confusion.

2	3 September 2026	By the end of this lesson, students will be able to describe how a microprocessor controls a familiar home device.	**H:** Show pictures of a washing machine, television and home alarm and ask what each controls. **ID:** Explain how microprocessors control settings or respond to information. Some connected devices are smart devices; not every device is connected. **WD:** Trace a washing-machine setting to a wash cycle and a movement sensor to an alarm using picture cards, without opening appliances. **YD:** Pairs choose a home-device card, label a setting or sensor and explain the action that the microprocessor controls. **C:** Check pupils link a device to a specific controlled action and can distinguish a sensor from the processor.	**Support:** Provide labelled device pictures, a file-and-folder diagram and a short step checklist. Use prepared practice files and allow a spoken explanation before writing. **Extension:** Ask pupils to compare two storage choices, explain a limitation and justify how their folder or version names prevent confusion.

MATERIALS NEEDED FOR THE WEEK

- Oxford International Primary Computing Student Book 4 printed pages 4-9
- Teacher computer and display
- Classroom computers, the approved software and the class save folder
- Prepared home and work device pictures, file and folder diagrams, and disposable practice files
- Whiteboard and markers
- Student notebooks, pencils and prepared vocabulary prompts
- Prepared task checklist and teacher observation record

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
