LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to apply microprocessor, storage and file-organisation skills in a short learning check. They will also learn to correct a misconception about microprocessors or file storage and apply it to a new task. Through teacher demonstrations, discussion and practical activities, students will practise these skills and explain their ideas.

End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Record understanding, correct locations and independent actions. Group common gaps for the feedback lesson. Ask each pupil to explain a correction and show the same skill with a fresh example. Note pupils who need further guided practice.

LESSON SLOTS - MONDAY AND THURSDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	28 September 2026	By the end of this lesson, students will be able to apply microprocessor, storage and file-organisation skills in a short learning check.	**H:** Revisit the microprocessor, data file, folder, storage and back-up vocabulary. **ID:** Explain that the check combines familiar device questions with an individual practical task. **WD:** Demonstrate how to record a reason using an unrelated device example without giving answers to the check. **YD:** Pupils explain a home or work use of a microprocessor, choose storage and independently save a named file in a folder with a back-up. **C:** Record understanding, correct locations and independent actions. Group common gaps for the feedback lesson.	**Support:** Provide labelled device pictures, a file-and-folder diagram and a short step checklist. Use prepared practice files and allow a spoken explanation before writing. **Extension:** Ask pupils to compare two storage choices, explain a limitation and justify how their folder or version names prevent confusion.
2	1 October 2026	By the end of this lesson, students will be able to correct a misconception about microprocessors or	**H:** Show an anonymous example confusing a folder, a file and a storage drive.	**Support:** Provide labelled device pictures, a file-and-folder diagram and a short step checklist. Use prepared

		file storage and apply it to a new task.	**ID:** Explain the common gaps from the learning check and revisit each idea with a different picture or practice file. **WD:** Model correcting one explanation and tracing a file's location before making a safe copy. **YD:** Pupils correct their responses and complete a similar device or file task. Give a targeted demonstration to those who need it. **C:** Ask each pupil to explain a correction and show the same skill with a fresh example.	practice files and allow a spoken explanation before writing. **Extension:** Ask pupils to compare two storage choices, explain a limitation and justify how their folder or version names prevent confusion.

MATERIALS NEEDED FOR THE WEEK

- Oxford International Primary Computing Student Book 4 printed pages 4-19
- Teacher computer and display
- Classroom computers, the approved software and the class save folder
- Prepared home and work device pictures, file and folder diagrams, and disposable practice files
- Whiteboard and markers
- Student notebooks, pencils and prepared vocabulary prompts
- Prepared task checklist and teacher observation record

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
