## LESSON OVERVIEW

### What should students know/do by the end of this week's lessons?

Students will learn to identify digital devices and explain that they contain a computer that uses numbers. They will also learn to identify the processor, input and output parts of a computer system. Through teacher demonstrations, discussion and practical activities, students will practise these skills and explain their ideas.

### End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Ask pupils to name a digital device and say why it belongs in that group. Check each pupil can identify an input, the processor and an output in the same system. Note pupils who need further guided practice.

## LESSON SLOTS - MONDAY AND THURSDAY

| Lesson | Date | Learning Objective | The Lesson Flow | Differentiation |
|---|---|---|---|---|
| 1 | 31 August 2026 | By the end of this lesson, students will be able to identify digital devices and explain that they contain a computer that uses numbers. | **H:** Compare a paper notebook, a tablet and a digital camera.<br><br>**ID:** Introduce Unit 1 Digital devices. Explain that computers represent information using numbers; electrical switches help make this possible.<br><br>**WD:** Use two on-off cards to represent 1 and 0, then identify familiar devices with a computer inside. Do not teach binary calculations.<br><br>**YD:** Pupils classify pictured objects as digital devices or non-digital objects and explain two choices.<br><br>**C:** Ask pupils to name a digital device and say why it belongs in that group. | **Support:** Use labelled device pictures, a vocabulary bank and a paired demonstration. Accept a spoken explanation before a short written response.<br><br>**Extension:** Ask pupils to compare two suitable devices or job tasks and explain a benefit and a limitation of their choice. |
| 2 | 3 September 2026 | By the end of this lesson, students will be able to identify the processor, input and output parts of a computer system. | **H:** Ask what happens between pressing a key and seeing a letter on a screen.<br><br>**ID:** Explain the processor | **Support:** Use labelled device pictures, a vocabulary bank and a paired demonstration. Accept a spoken explanation before a short written response. |

| | | | | |
|---|---|---|---|---|
| | | | as the part that follows instructions and controls other parts. Revisit input and output.<br><br>**WD:** Trace keyboard input to the processor and screen output on a diagram; compare a desktop and laptop without opening equipment.<br><br>**YD:** Pairs label a prepared computer diagram and choose an input and output for a simple task.<br><br>**C:** Check each pupil can identify an input, the processor and an output in the same system. | **Extension:** Ask pupils to compare two suitable devices or job tasks and explain a benefit and a limitation of their choice. |

## MATERIALS NEEDED FOR THE WEEK

- Oxford International Primary Computing Student Book 3 printed pages 4-9
- Teacher computer and display
- Classroom computers, the approved software and the class save folder
- Prepared device pictures, job-and-task cards and labelled diagrams
- Whiteboard and markers
- Student notebooks, pencils and prepared vocabulary prompts
- Prepared task checklist and teacher observation record

## END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
