2 Digital literacy: Explorers

You will learn

- how to use technology to send and receive messages
- to describe the parts of a message
- how to respond to a communication you are not sure about, or find worrying.

People are curious. For thousands of years, people have been curious to find new places, far away from their homes.

In this unit you are going to pretend to be explorers. An explorer travels to new places. An explorer might learn about plants, animals and the environment. An explorer might search for treasure or a place to build a home.

Talk about...

We communicate with each other in lots of different ways. How many different ways of communicating can you think of?

Learning outcomes: Use technology to send and receive messages; Describe the parts of a message; Explain how to respond to an unsuitable communication

email
spam phishing attachment
inbox email address
domain pharming

Class activity

Work in a group. Draw and write to show the journey of an explorer. Show some of the places they went and what they did. If you know about a real explorer from your country you can use them as an example. Or you can use an imaginary example, such as the first person to go to Mars.

Did you know?

Ibn Battuta was a famous explorer from Morocco. He lived more than 600 years ago. Ibn Battuta travelled over Africa, the Middle East and much of Asia.

2.1 Communicating

In this lesson

You will learn:

- about different ways of communicating
- what email is.

Spiral back

Last year you learned how to use the internet to find information. You learned how to say what kinds of information are personal and private, and how to stay safe and happy in the computer room. In this unit you are going to learn how to use the internet to send and receive messages.

Ways of communicating

We can communicate in lots of different ways. To communicate means to share ideas or information with another person.

Some letters are personal. Some letters are about practical things.

Sometimes we need to send a message very quickly. We can use electronic mail, called **email**, to send messages immediately. Email uses the internet to send the message.

Some ways of communicating are very reliable. 'Reliable' means that the message will definitely get to the other person.

Some ways of communicating are private. They will only be seen by one person.

Some ways of communicating are very quick.

Some ways of communicating are easy to use.

Activity

Look at these ways of communicating.

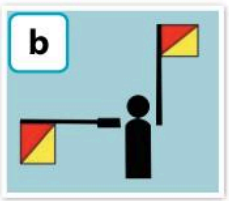

Which way or ways are reliable?

Which way or ways are private?

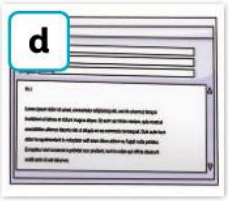

Which way or ways are quick?

Which way or ways are easy to use?

Extra challenge

Can you make up your own way of communicating?

Think again

Email is very popular. Why do you think email is so popular?

Digital citizen of the future

Some email systems seem to be free to use. You do not have to pay for a stamp to send the email.

We call the companies who make email systems 'email providers'. How do you think email providers make money?

2.2 What does an email look like?

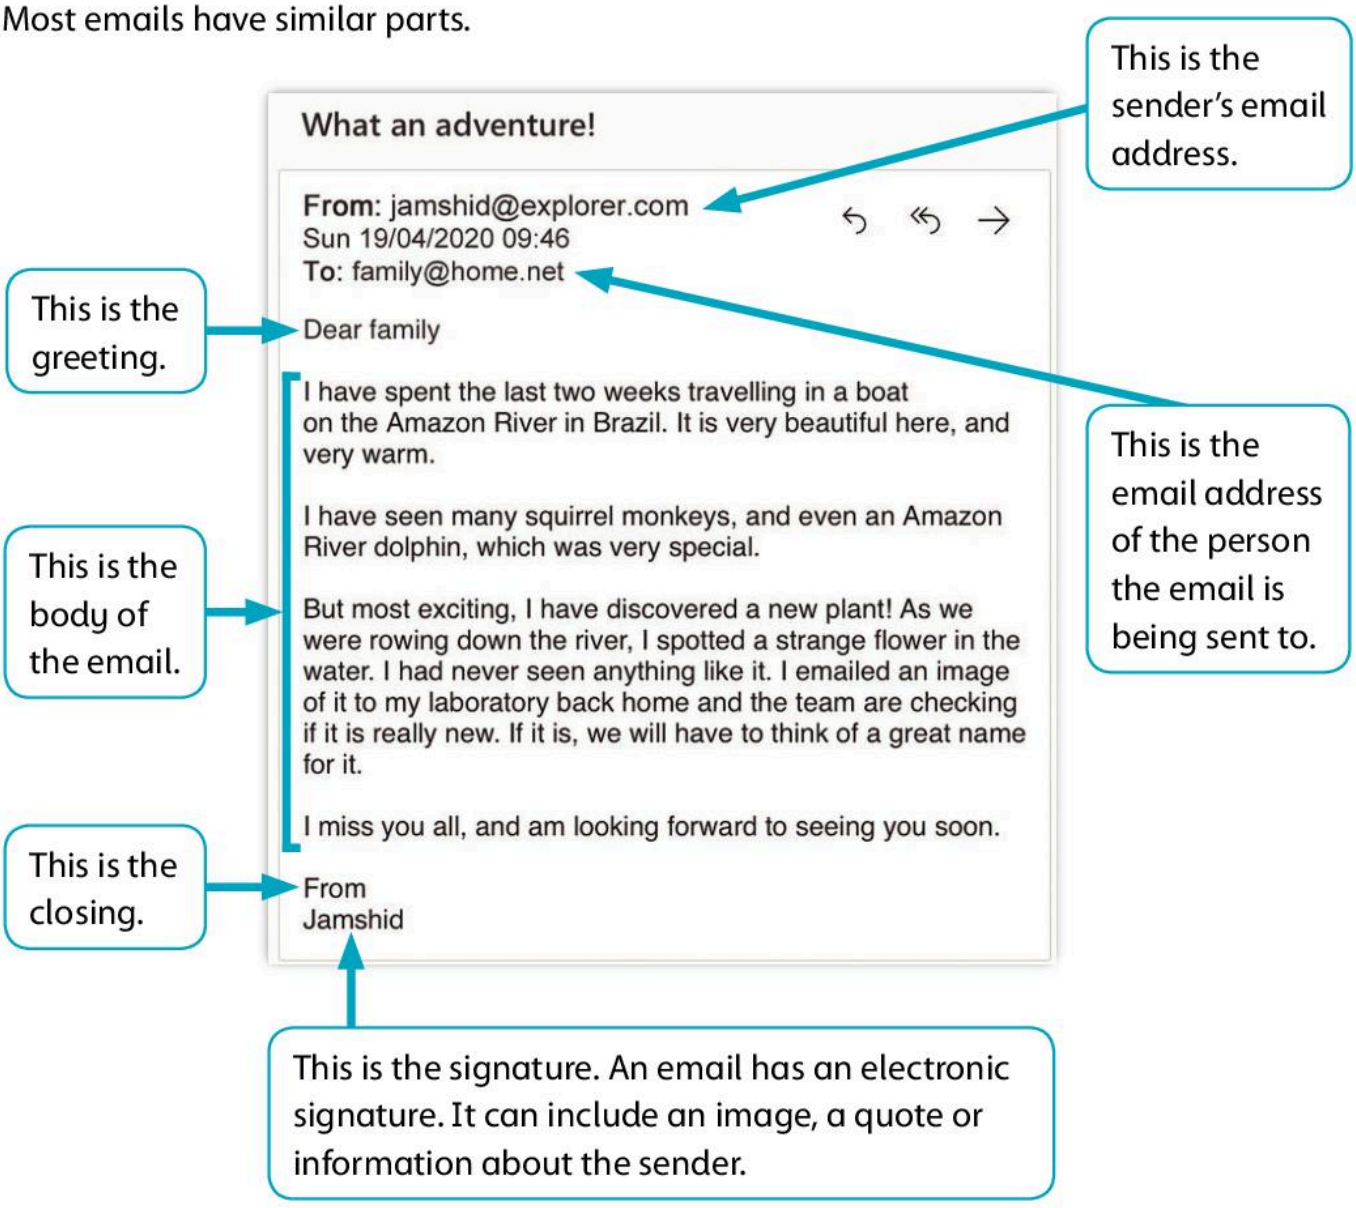

In this lesson

You will learn:

- about the different parts of an email.

Parts of an email

Most emails have similar parts.

Activity

You are going to open your own email account.

Follow the instructions from your teacher for the type of email system your school uses.

Open a new email.

Can you find the right places to put the:

- email address you are sending to
- subject
- body
- signature?

Extra challenge

What is the best way to send different messages? Talk with a classmate about different kinds of messages and the best ways to send them. For example, phone, talking face-to-face or a letter.

Think again

Where should you click to send the email? Draw or write your answer.
