LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to identify a robot and explain how its design helps it perform a programmed task. They will also learn to match robot applications to repetitive, precise or dangerous tasks and justify a choice. Through teacher demonstrations, discussion and practical activities, students will practise these skills and explain their ideas.

End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Ask pupils to identify one robot feature, its purpose and why a robot is not guaranteed to work correctly. Check a justified robot application and a realistic limit; correct claims that robots never make mistakes. Note pupils who need further guided practice.

LESSON SLOTS - WEDNESDAY AND THURSDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	2 September 2026	By the end of this lesson, students will be able to identify a robot and explain how its design helps it perform a programmed task.	**H:** Compare a robot arm, a robot vacuum and a fictional humanoid. **ID:** Introduce Unit 1 Robots. Explain programmed actions and that robots need not look human; robots can fail or make errors. **WD:** Label the task and moving parts of a robot cleaner and distinguish its automatic actions from direct human control. **YD:** Pupils sketch a cleaning robot, label its useful features and justify a humanoid or non-humanoid shape. **C:** Ask pupils to identify one robot feature, its purpose and why a robot is not guaranteed to work correctly.	**Support:** Provide labelled robot diagrams, vocabulary prompts and control-loop cards. Accept a spoken explanation before writing; rehearse one example together. **Extension:** Ask pupils to test an unusual input, explain a possible failure and improve the design without changing its main purpose.
2	3 September 2026	By the end of this lesson, students will be able to match robot applications to repetitive, precise or	**H:** Ask why a factory might use a robot to repeat the same movement.	**Support:** Provide labelled robot diagrams, vocabulary prompts and control-loop cards. Accept a spoken

		dangerous tasks and justify a choice.	**ID:** Discuss manufacturing, exploration and hazardous environments; people design, supervise and maintain robots. **WD:** Trace three stages of a car assembly line, showing coordinated actions and a human safety check. **YD:** Pairs match robot examples to tasks and create a robots-and-people comparison with reasons. **C:** Check a justified robot application and a realistic limit; correct claims that robots never make mistakes.	explanation before writing; rehearse one example together. **Extension:** Ask pupils to test an unusual input, explain a possible failure and improve the design without changing its main purpose.

MATERIALS NEEDED FOR THE WEEK

- Oxford International Primary Computing Student Book 6 printed pages 4-9
- Teacher computer and display
- Classroom computers or laptops and the class save folder
- Prepared robot pictures, labelled component diagrams and control-loop cards
- Whiteboard and markers
- Student notebooks, pencils and task sheets
- Prepared examples and the lesson success checklist

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
