LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to describe a robot application and explain a benefit and a possible difficulty for people. They will also learn to distinguish an existing robotic use from a future proposal and explain why people must check it. Through teacher demonstrations, discussion and practical activities, students will practise these skills and explain their ideas.

End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Ask pupils to support a balanced judgement with details of the chosen task. Check that pupils label proposals clearly and explain one limitation or safety check without claiming that AI thinks like a person. Note pupils who need further guided practice.

LESSON SLOTS - WEDNESDAY AND THURSDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	16 September 2026	By the end of this lesson, students will be able to describe a robot application and explain a benefit and a possible difficulty for people.	**H:** Compare pictures of a manual and a robot-assisted production line. **ID:** Discuss robots in farming, warehouses and shops, including supervision, maintenance and changes to work. **WD:** Compare a fruit-picking robot with a human picker and explain the need to sense ripeness and handle fruit carefully. **YD:** Groups choose an application and make a labelled comparison showing one benefit, one difficulty and a human role. **C:** Ask pupils to support a balanced judgement with details of the chosen task.	**Support:** Provide labelled robot diagrams, vocabulary prompts and control-loop cards. Accept a spoken explanation before writing; rehearse one example together. **Extension:** Ask pupils to test an unusual input, explain a possible failure and improve the design without changing its main purpose.
2	17 September 2026	By the end of this lesson, students will be able to distinguish an existing robotic use from a future proposal and explain why	**H:** Show a robot-assisted operation and a drawing of a tiny future medical robot.	**Support:** Provide labelled robot diagrams, vocabulary prompts and control-loop cards. Accept a spoken explanation before writing;

		people must check it.	**ID:** Discuss AI-enabled recognition, robot vehicles and healthcare; distinguish established examples from predictions in the book. **WD:** Sort an observed use, a research idea and an unsupported claim; model checking evidence rather than treating a prediction as fact. **YD:** Pupils design a future robot proposal with a useful task, required sensors, a possible failure and a human check. **C:** Check that pupils label proposals clearly and explain one limitation or safety check without claiming that AI thinks like a person.	rehearse one example together. **Extension:** Ask pupils to test an unusual input, explain a possible failure and improve the design without changing its main purpose.

MATERIALS NEEDED FOR THE WEEK

- Oxford International Primary Computing Student Book 6 printed pages 14-17
- Teacher computer and display
- Classroom computers or laptops and the class save folder
- Prepared robot pictures, labelled component diagrams and control-loop cards
- Whiteboard and markers
- Student notebooks, pencils and task sheets
- Prepared examples and the lesson success checklist

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
