LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to demonstrate understanding of robot applications, components and feedback through a learning check. They will also learn to correct a robot or control-system misconception and apply the correction to a new example. Through teacher demonstrations, discussion and practical activities, students will practise these skills and explain their ideas.

End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Record secure and developing outcomes for each pupil and choose a specific focus for feedback. Ask pupils to explain why their correction works and record who still needs guided practice. Note pupils who need further guided practice.

LESSON SLOTS - WEDNESDAY AND THURSDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	30 September 2026	By the end of this lesson, students will be able to demonstrate understanding of robot applications, components and feedback through a learning check.	**H:** Use a quick retrieval prompt for sensor, controller and actuator. **ID:** Explain the check: identify an application, label components, trace a feedback loop and justify a design. **WD:** Model the answer format with an unrelated device without revealing the check's answers. **YD:** Pupils complete short questions and explain how their robot design responds when its input changes. **C:** Record secure and developing outcomes for each pupil and choose a specific focus for feedback.	**Support:** Provide labelled robot diagrams, vocabulary prompts and control-loop cards. Accept a spoken explanation before writing; rehearse one example together. **Extension:** Ask pupils to test an unusual input, explain a possible failure and improve the design without changing its main purpose.
2	1 October 2026	By the end of this lesson, students will be able to correct a robot or control-system misconception and apply the correction to a new example.	**H:** Show an anonymous diagram with the sensor and actuator reversed. **ID:** Reteach the most common learning-check error with clear input and	**Support:** Provide labelled robot diagrams, vocabulary prompts and control-loop cards. Accept a spoken explanation before writing; rehearse one example together.

			action arrows. **WD:** Correct the diagram and trace a new reading through a complete feedback loop. **YD:** Pupils correct their own responses and apply the idea to a robot or air-conditioning example. **C:** Ask pupils to explain why their correction works and record who still needs guided practice.	**Extension:** Ask pupils to test an unusual input, explain a possible failure and improve the design without changing its main purpose.

MATERIALS NEEDED FOR THE WEEK

- Oxford International Primary Computing Student Book 6 printed pages 4-19
- Teacher computer and display
- Classroom computers or laptops and the class save folder
- Prepared robot pictures, labelled component diagrams and control-loop cards
- Whiteboard and markers
- Student notebooks, pencils and task sheets
- Prepared examples and the lesson success checklist

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
