LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will practise the taught knowledge and skills in Unit 1: robot uses, sensors, controllers, actuators and feedback loops. They will complete a mock assessment, review feedback and correct misunderstandings before assessment week.

End-of-Week Assessment/Check: How will you know they got it?

Compare the mock task with each pupil's corrected work and similar follow-up task. Check that pupils can explain a correction and apply it independently. Record any outcome that needs another guided example.

LESSON SLOTS - WEDNESDAY AND THURSDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	7 October 2026	By the end of this lesson, students will be able to complete a mock assessment of robots and control systems and identify a practice target.	**H:** Invite pupils to recall the unit with familiar vocabulary prompts. **ID:** Explain that the mock practises taught outcomes and is followed by feedback before assessment week. **WD:** Model the response format with an unrelated example and show how to give a reason. **YD:** Pupils identify robot applications, label sensors and actuators and trace a feedback loop and label a useful robot design and explain its response to two input scenarios. Review the results and select one specific practice target. **C:** Collect the mock evidence and identify common misconceptions for the next lesson.	**Support:** Provide the familiar vocabulary bank and read instructions as needed without supplying answers. Use targeted prompts after the independent attempt. **Extension:** Ask pupils to explain the reason for a correction and apply it to a different example.
2	8 October 2026	By the end of this lesson, students will be able to correct a misconception and improve a task about robots and control systems.	**H:** Show an anonymous error from the mock and ask for a kind, specific suggestion. **ID:** Revisit the common	**Support:** Provide the familiar vocabulary bank and read instructions as needed without supplying answers. Use targeted prompts after the independent attempt.

			error using the taught vocabulary and the familiar success criteria. **WD:** Model a correction, explain why it works and check it against the task. **YD:** Pupils correct their own work, then label a useful robot design and explain its response to two input scenarios in a similar follow-up task with targeted support. **C:** Ask pupils to explain their correction and record who needs a further guided example before assessment.	**Extension:** Ask pupils to explain the reason for a correction and apply it to a different example.

MATERIALS NEEDED FOR THE WEEK

- Oxford International Primary Computing Student Book 6 printed pages 4-19
- Teacher computer and display
- Classroom computers or laptops and the class save folder
- Prepared mock assessment tasks covering the stated outcomes
- Whiteboard and markers
- Student notebooks, pencils and task sheets
- Teacher observation checklist and school access arrangements

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
