Teacher:	Ray Joshua Balingkit	**Subject:**	Computing
Week:	2 (Term 1)	**Year:**	8
Link:		**Cover:**	

LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to identify network hardware and explain the roles of a switch, router, access point and server. They will also learn to draw a simple network and explain how wired and wireless devices access shared services. Through teacher demonstrations, discussion and practical activities, students will practise these skills and explain their ideas.

End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Check four correct hardware-role matches and a clear distinction between a router and a server. Check the connections and message paths; ensure pupils do not assume that Wi-Fi alone guarantees internet access. Note pupils who need further guided practice.

LESSON SLOTS - MONDAY AND TUESDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	31 August 2026	By the end of this lesson, students will be able to identify network hardware and explain the roles of a switch, router, access point and server.	**H:** Show a laptop connected to a shared printer and ask what helps the devices communicate. **ID:** Introduce Unit 1 Understanding networks. Explain network interfaces, switches within a network, routers between networks, wireless access points and servers providing services. **WD:** Trace a file request through a labelled diagram; contrast a legacy hub repeating data with a switch using destination information. **YD:** Pupils match hardware cards to roles and label a small school network, explaining one device choice. **C:** Check four correct hardware-role matches and a clear distinction between a router and a server.	**Support:** Provide labelled hardware cards, a simple network map and a check-observe-report flow. Model one path at a time and accept spoken reasoning before writing. **Extension:** Ask pupils to compare two possible paths or solutions and explain one limit of the network model or chosen storage arrangement.

2	1 September 2026	By the end of this lesson, students will be able to draw a simple network and explain how wired and wireless devices access shared services.	**H:** Compare a home-network diagram with a school-network diagram. **ID:** Explain a LAN, wired links and Wi-Fi; a home device can combine several functions. Compare electrical signals in copper with light in fibre. **WD:** Draw clients, a switch, an access point, a server and a router; trace one local request and one internet request. **YD:** Pairs plan connections for a small classroom and justify a wired or wireless link and a suitable cable for a longer connection. **C:** Check the connections and message paths; ensure pupils do not assume that Wi-Fi alone guarantees internet access.	**Support:** Provide labelled hardware cards, a simple network map and a check-observe-report flow. Model one path at a time and accept spoken reasoning before writing. **Extension:** Ask pupils to compare two possible paths or solutions and explain one limit of the network model or chosen storage arrangement.

MATERIALS NEEDED FOR THE WEEK

- Oxford International Lower Secondary Computing Student Book 8 printed pages 4-13
- Teacher computer and display
- Classroom computers or laptops and the class save folder
- Labelled network diagrams, hardware cards, message cards and connection scenarios
- Whiteboard and markers
- Student notebooks, pencils and task sheets
- Teacher reference: https://www.cisco.com/site/us/en/learn/topics/small-business/network-switch-vs-router.html

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
