LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to describe an authorised connection and choose safe checks for a network problem. They will also learn to explain where cloud files are stored and compare cloud services with local storage. Through teacher demonstrations, discussion and practical activities, students will practise these skills and explain their ideas.

End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Check the observation order, useful error report and a safe action that preserves school controls. Check where cloud data is stored, one benefit and one limitation; cloud files are not guaranteed to be safe. Note pupils who need further guided practice.

LESSON SLOTS - MONDAY AND TUESDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	14 Septemb er 2026	By the end of this lesson, students will be able to describe an authorised connection and choose safe checks for a network problem.	**H:** Show a fictional device displaying Wi-Fi connected but no internet access. **ID:** Compare wired, Wi-Fi and mobile connections. Distinguish joining a network from signing into a service; use fictional credentials only. **WD:** Use screenshots to check the approved network, connection status and login case. Record an error and report it without changing settings. **YD:** Pairs follow a paper troubleshooting flow for a connection or login error and identify when staff help is needed. **C:** Check the observation order, useful error report and a safe action that preserves school controls.	**Support:** Provide labelled hardware cards, a simple network map and a check-observe-report flow. Model one path at a time and accept spoken reasoning before writing. **Extension:** Ask pupils to compare two possible paths or solutions and explain one limit of the network model or chosen storage arrangement.
2	15 Septemb	By the end of this lesson, students will be able to	**H:** Ask where a file goes when it is saved to a cloud	**Support:** Provide labelled hardware cards, a simple

	er 2026	explain where cloud files are stored and compare cloud services with local storage.	folder. **ID:** Explain remote servers, storage and online applications. Discuss access, permissions, connectivity and backup limits. **WD:** Compare prepared local, online-only and offline-enabled files; explain that offline access must be arranged, not assumed. **YD:** Pupils choose storage for three school scenarios and justify each choice using access, privacy and connection needs. **C:** Check where cloud data is stored, one benefit and one limitation; cloud files are not guaranteed to be safe.	network map and a check-observe-report flow. Model one path at a time and accept spoken reasoning before writing. **Extension:** Ask pupils to compare two possible paths or solutions and explain one limit of the network model or chosen storage arrangement.

MATERIALS NEEDED FOR THE WEEK

- Oxford International Lower Secondary Computing Student Book 8 printed pages 22-29
- Teacher computer and display
- Classroom computers or laptops and the class save folder
- Labelled network diagrams, hardware cards, message cards and connection scenarios
- Whiteboard and markers
- Student notebooks, pencils and task sheets
- Teacher reference: https://csrc.nist.gov/glossary/term/cloud_computing

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
