LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to trace a message through a network and explain the roles of forwarding and receiving devices. They will also learn to use evidence to choose safe next steps for a simple connection problem. Through teacher demonstrations, discussion and practical activities, students will practise these skills and explain their ideas.

End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Check the route, correct hardware roles and an explanation distinguishing forwarding from storing or serving files. Check that the action fits the evidence, avoids exposing passwords and escalates problems that require staff access. Note pupils who need further guided practice.

LESSON SLOTS - MONDAY AND TUESDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	21 September 2026	By the end of this lesson, students will be able to trace a message through a network and explain the roles of forwarding and receiving devices.	**H:** Present a diagram with a router incorrectly labelled as a file server. **ID:** Review hardware roles, destination addresses and the packet-delivery model. **WD:** Correct the diagram, trace a request through two routers and show the destination receiving the data. **YD:** Groups model two messages, record their paths and explain how an ordered message can be rebuilt in the classroom simulation. **C:** Check the route, correct hardware roles and an explanation distinguishing forwarding from storing or serving files.	**Support:** Provide labelled hardware cards, a simple network map and a check-observe-report flow. Model one path at a time and accept spoken reasoning before writing. **Extension:** Ask pupils to compare two possible paths or solutions and explain one limit of the network model or chosen storage arrangement.
2	22 September 2026	By the end of this lesson, students will be able to use evidence to choose safe next steps for a	**H:** Show two devices: one has a Wi-Fi problem and one is connected but cannot open a single site.	**Support:** Provide labelled hardware cards, a simple network map and a check-observe-report flow. Model

		simple connection problem.	**ID:** Explain that a problem can involve the device, local connection, service or wider internet; change only what school rules permit. **WD:** Compare the observations, test one approved resource and write a report with location, error and checks already made. **YD:** Pairs solve fictional connection cards using a check-observe-report flow, then exchange their reasoning with another pair. **C:** Check that the action fits the evidence, avoids exposing passwords and escalates problems that require staff access.	one path at a time and accept spoken reasoning before writing. **Extension:** Ask pupils to compare two possible paths or solutions and explain one limit of the network model or chosen storage arrangement.

MATERIALS NEEDED FOR THE WEEK

- Oxford International Lower Secondary Computing Student Book 8 printed pages 14-25
- Teacher computer and display
- Classroom computers or laptops and the class save folder
- Labelled network diagrams, hardware cards, message cards and connection scenarios
- Whiteboard and markers
- Student notebooks, pencils and task sheets
- Teacher reference: https://www.rfc-editor.org/rfc/rfc9293.html (TCP and reliable delivery)

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
