LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to demonstrate understanding of network hardware, packets, connections and cloud services. They will also learn to correct a networking misconception and apply the correction to a new scenario. Through teacher demonstrations, discussion and practical activities, students will practise these skills and explain their ideas.

End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Record secure and developing outcomes and choose a specific focus for the feedback lesson. Ask pupils to explain the correction and record who can now apply the idea without a prompt. Note pupils who need further guided practice.

LESSON SLOTS - MONDAY AND TUESDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	28 September 2026	By the end of this lesson, students will be able to demonstrate understanding of network hardware, packets, connections and cloud services.	**H:** Use a brief retrieval prompt for switch, router, packet and cloud storage. **ID:** Explain the check: label hardware, trace a message, explain a missing packet and choose a safe connection or storage action. **WD:** Model the response format with an unrelated example without revealing the check's answers. **YD:** Pupils complete short questions and annotate a network diagram, explaining one troubleshooting or storage decision. **C:** Record secure and developing outcomes and choose a specific focus for the feedback lesson.	**Support:** Provide labelled hardware cards, a simple network map and a check-observe-report flow. Model one path at a time and accept spoken reasoning before writing. **Extension:** Ask pupils to compare two possible paths or solutions and explain one limit of the network model or chosen storage arrangement.
2	29 September 2026	By the end of this lesson, students will be able to correct a networking misconception and apply the correction to a new scenario.	**H:** Display an anonymous response confusing a wireless connection with internet access. **ID:** Reteach the common	**Support:** Provide labelled hardware cards, a simple network map and a check-observe-report flow. Model one path at a time and accept spoken reasoning before

			error with a hardware diagram, message cards or storage examples as appropriate. **WD:** Correct one explanation and test it against a new device or connection scenario. **YD:** Pupils correct their own responses and complete a similar independent task, with targeted guided practice where needed. **C:** Ask pupils to explain the correction and record who can now apply the idea without a prompt.	writing. **Extension:** Ask pupils to compare two possible paths or solutions and explain one limit of the network model or chosen storage arrangement.

MATERIALS NEEDED FOR THE WEEK

- Oxford International Lower Secondary Computing Student Book 8 printed pages 4-31
- Teacher computer and display
- Classroom computers or laptops and the class save folder
- Labelled network diagrams, hardware cards, message cards and connection scenarios
- Whiteboard and markers
- Student notebooks, pencils and task sheets
- Teacher reference: https://www.rfc-editor.org/rfc/rfc9293.html (TCP and reliable delivery)

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
