

Teacher:	Ray Joshua Balingkit	**Subject:**	Computing
Week:	10 (Term 1)	**Year:**	8
Link:		**Cover:**	

LESSON OVERVIEW

What should students know/do by the end of this week's lessons?

Students will learn to choose computing tools for a learning task and explain how technology can improve access. They will also learn to explain how computers help scientists collect, analyse and interpret evidence. Through teacher demonstrations, discussion and practical activities, students will practise these skills and explain their ideas.

End-of-Week Assessment/Check: How will you know they got it?

Use teacher observation, pupil explanations and the completed practical or paper activity. Check a suitable tool choice and an explanation of how a simulation or assistive feature helps a learner. Check the data-to-conclusion chain and a reason why scientists must evaluate a computer's results rather than accept every prediction. Note pupils who need further guided practice.

LESSON SLOTS - MONDAY AND TUESDAY

Lesson	Date	Learning Objective	The Lesson Flow	Differentiation
1	26 October 2026	By the end of this lesson, students will be able to choose computing tools for a learning task and explain how technology can improve access.	**H:** Ask pupils how they use computing skills in another school subject. **ID:** Introduce Unit 2 Computers and learning. Review reliable research, presenting work, simulations and assistive tools; no single tool suits every learner. **WD:** Match a geography task to a checked source and a clear document; demonstrate a prepared simulation or accessibility example. **YD:** Pairs choose tools for two learning scenarios, justify their choices and identify one source or access check. **C:** Check a suitable tool choice and an explanation of how a simulation or assistive feature helps a learner.	**Support:** Provide a small approved source pack, a slide starter and a link-testing checklist. Break the task into content, layout, question and feedback steps. **Extension:** Ask pupils to improve an explanation, accessibility feature or feedback message, then retest it against the learning goal.
2	27 October	By the end of this lesson, students will be able to	**H:** Show a rover image and a weather-data	**Support:** Provide a small approved source pack, a slide

	2026	explain how computers help scientists collect, analyse and interpret evidence.	display and ask what information scientists need. **ID:** Explain sensors, stored observations, calculations and models in space research and weather forecasting; model results need checking against evidence. **WD:** Trace sensor readings to a computer model and a forecast, then compare a prediction with supplied observations. **YD:** Pupils annotate a discovery case study, identifying input data, processing, output and a limit of the model. **C:** Check the data-to-conclusion chain and a reason why scientists must evaluate a computer's results rather than accept every prediction.	starter and a link-testing checklist. Break the task into content, layout, question and feedback steps. **Extension:** Ask pupils to improve an explanation, accessibility feature or feedback message, then retest it against the learning goal.

MATERIALS NEEDED FOR THE WEEK

- Oxford International Lower Secondary Computing Student Book 8 printed pages 32-41
- Teacher computer and display
- Classroom computers or laptops and the class save folder
- Teacher-approved research sources, a presentation starter and a link-testing checklist
- Whiteboard and markers
- Approved image pack with permission details and source-credit records
- Saved draft files, individual contribution records and the lesson success checklist

END-OF-WEEK REFLECTION

- What worked well?

- What flopped or confused students?

- What needs to be re-taught or adjusted next week?
